

Albert Duntugan serves as the Senior Director of Enterprise Information Architecture for the UCLA Health Sciences in its Office of Health Informatics & Analytics. Albert directs the office's data governance program, and works to align federated analytics teams that have a diverse range of specializations that includes clinical quality, biomedical informatics, finance, and operations. He also leads the office's data architecture team, which, in concert with other enterprise architecture teams, builds the technology assets that enable the health sciences' self-service analytics strategy.

Albert has 20 years of experience in healthcare at UCLA Health. Prior to his role in information technology, he served in leadership positions in finance and operations, with a concentration on physician billing, managed care operations, commercial and regulatory pay-for-performance programs, and practice operations. Albert received a bachelor of science in biology from Loyola Marymount University, and a master of health administration degree from the University of Southern California.
